

Our Vision

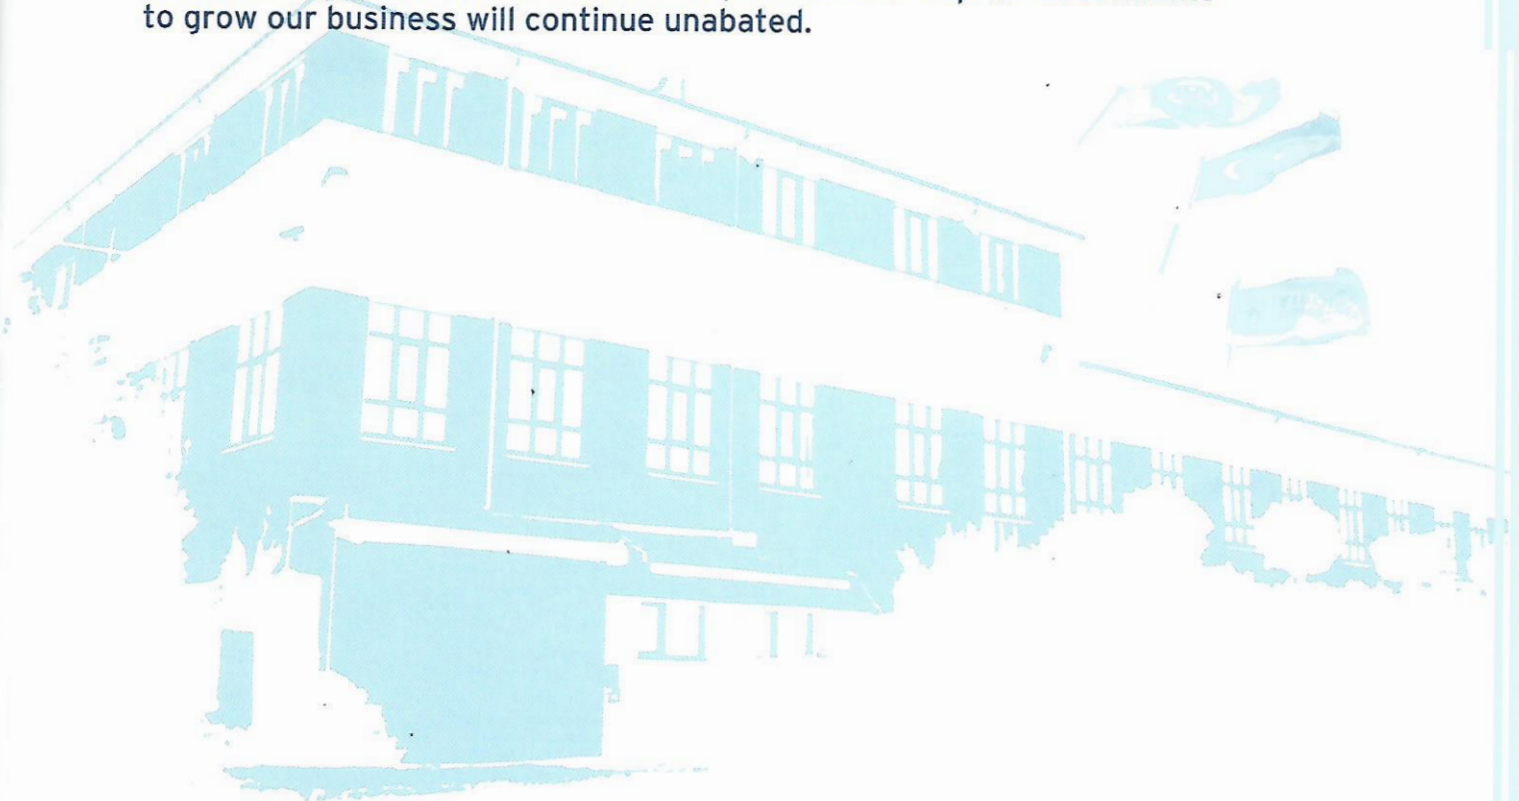

Yıldız was established in 1994 with a product range that consisted of insulation accessories for transformers and a 300 square-meter factory with an annual capacity of just 50 tonnes.

Our strong embrace of core principles such as being on the cutting edge of technology, complying with international standards in production and targeting utmost customer satisfaction while offering competitive pricing enabled us to grow fast and become a preferred supplier to the Turkish transformer industry over the years.

Through careful planning and capital investments, today, our production facilities have reached 15,000 square meters of open and 5,000 square meters of enclosed space and 1,500 square meters of storage area. Our annual capacity has risen to 500 tonnes while we are able to store a total of 500 tonnes of raw materials and work-in-progress inventory. Our facilities also have ISO 9001 certification.

Our product range now serves 80% of the insulation needs of the transformer industry.

Our capital investments, careful planning and increase in management experience over the years have now enabled us to access global markets. As of the beginning of 2008, we are proud to have achieved the required production capacity and level of expertise to be taking orders for our product range from international firms, as well. Our capital investments to grow our business will continue unabated.

Our Quality Policy

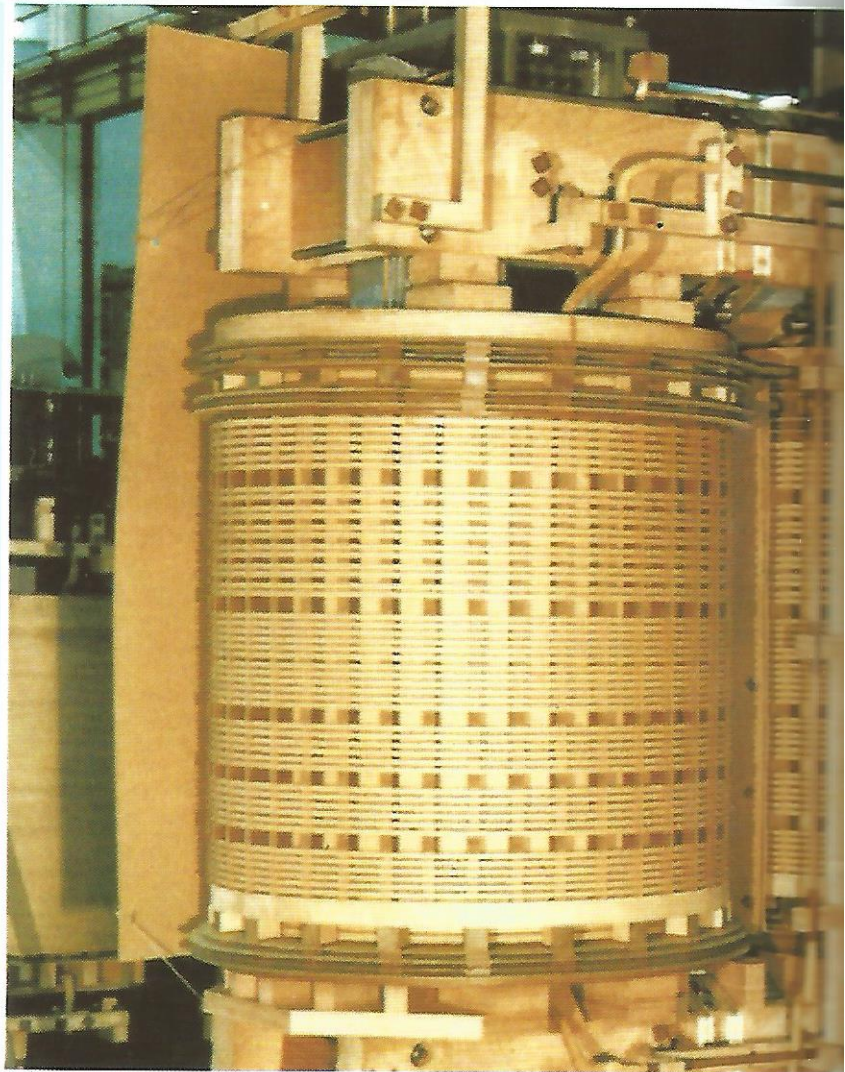

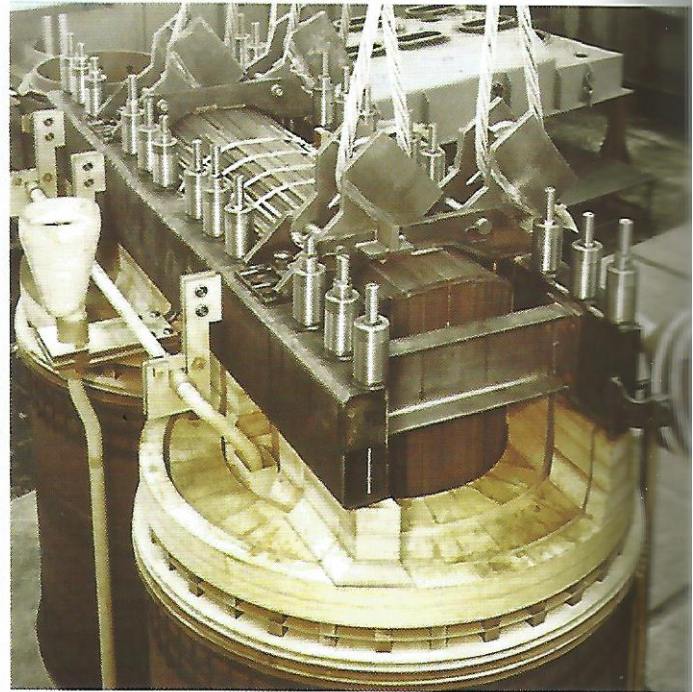

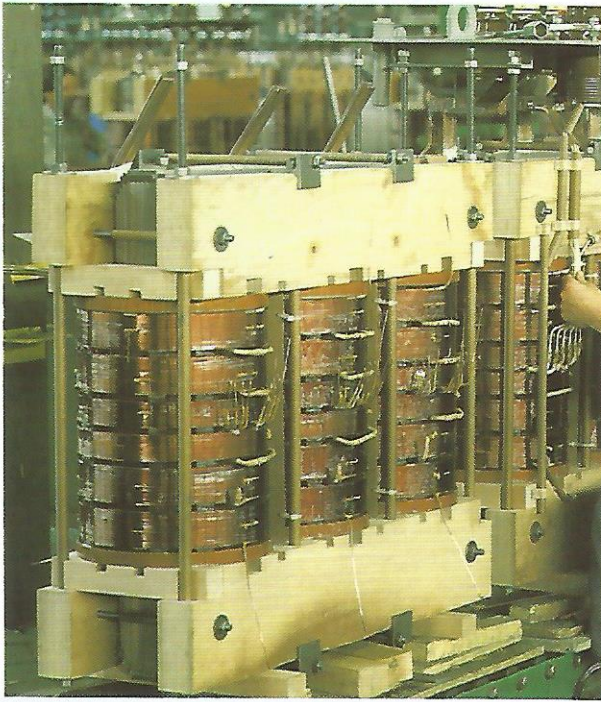

Our most important priority regarding the quality of our products and service is ensuring customer satisfaction through full compliance with the ISO 9001 International Quality Management Standard. The high level of satisfaction we have achieved in our dealings with our clients in the transformer industry attests to the success of our efforts regarding quality management.

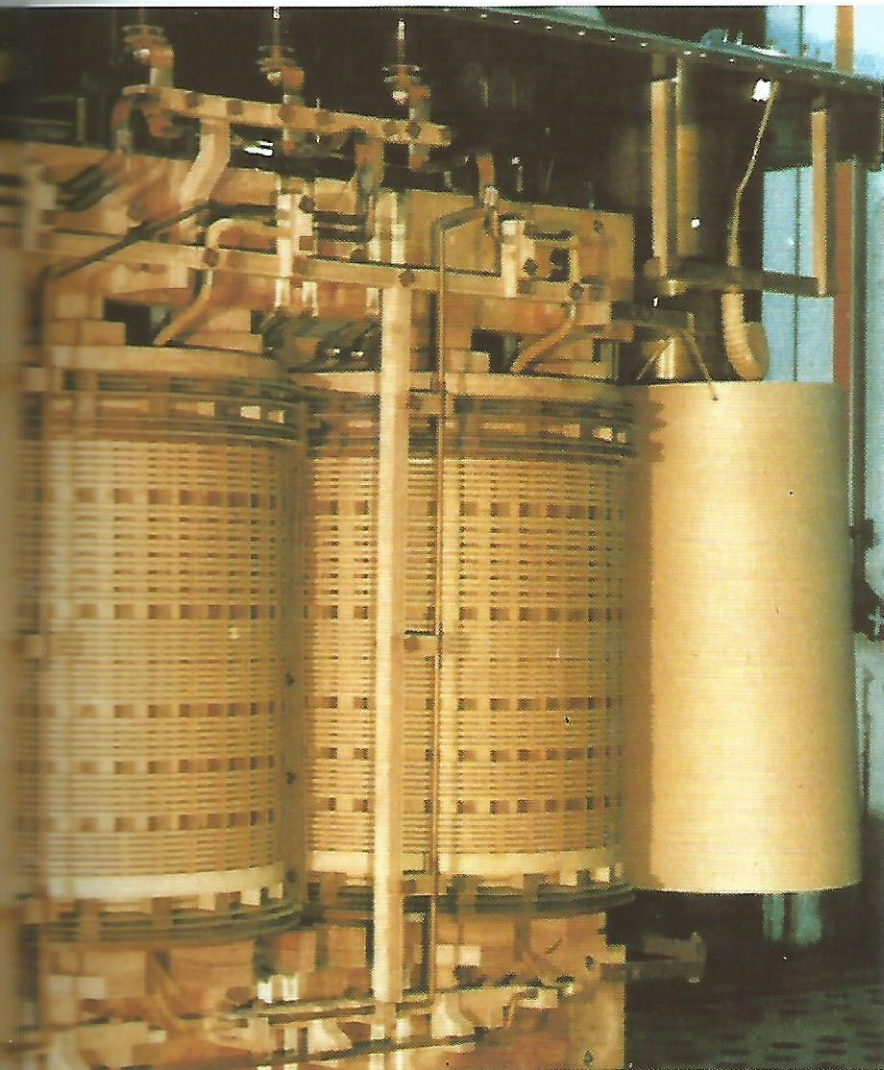

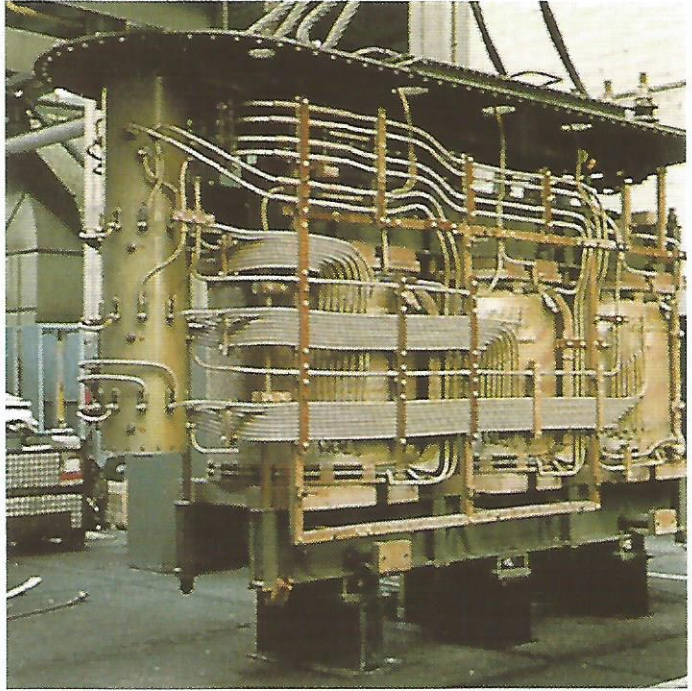

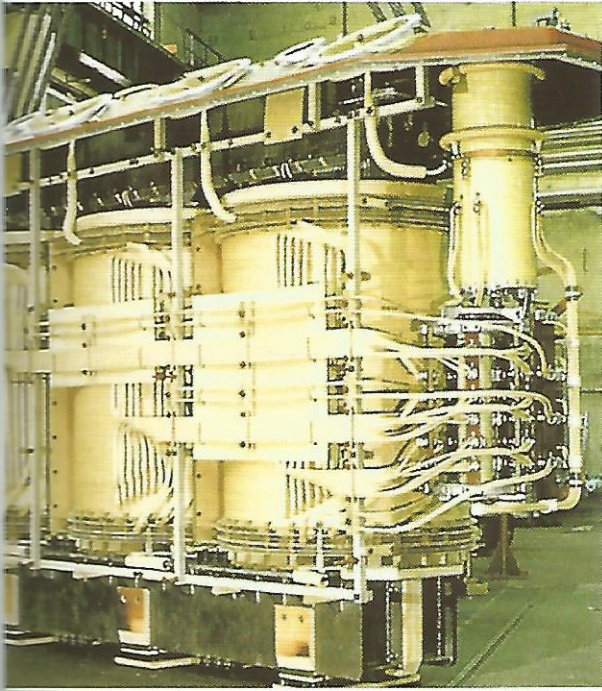

Our quality pledge: We view obtaining the best materials for our production from the most respected suppliers in the business as a requirement in ensuring product quality.

Our production strictly adheres to the technical drawings provided by our customers and complies with their special demands.

Our quality control process is present at every level of production. A product leaving our factory performs as desired 100% of the time, obviating the need for our customers to test our products themselves.

Our transparency pledge: Provided that advance notice is given to us for scheduling purposes, our clients may, should they wish to do so, monitor the fulfillment of their orders from our factory floor and also perform any checks they deem necessary while production takes place.

PACKAGING

The packaging of our products complies with the customer requests specified in the order. If there are no such requests, the packaging is done in compliance with international standards so as to ensure that the product suffers no damage during delivery and storage. All our packages have documentation and markings that include a description of the product contained therein, its quantity and also with the order information.

STORAGE

100 tonnes storage capacity of
insulation materials at all times
